Mathematical Analysis
in Fluid and Gas Dynamics

April, 2000

Research Institute for Mathematical Sciences

Kyoto University, Kyoto, Japan

流体と気体の数学解析
Mathematical Analysis in Fluid and Gas Dynamics
研究集会報告集

1999年 7月12日～ 7月14日

研究代表者 松村 昭孝(Akitaka Matsumura)
副代表者 川島 秀一(Shuichi Kawashima)

目 次

1. On thermal convection equations of Oberbeck-Boussinesq type with
the dissipation function-----1
 九大・数理 隠居 良行(Yoshiyuki Kagei)
2. Electrorheological Fluids: Modeling and Mathematical Theory-----16
 Univ. of Freiburg M. Růžička
3. Bilinear estimates and critical Sobolev inequality in BMO,
with applications to the Navier-Stokes and the Euler equations-----39
 東北大・理学 小 藺 英雄(Hideo Kozono)
 名大・多元数理 谷 内 靖(Yasushi Taniuchi)
4. Delamination Models : link with Fracture Mechanics-----53
 C.N.A.M. Nelly Point
5. ON SOME STABILITY THEOREM OF THE NAVIER-STOKES EQUATION IN
THE THREE DIMENSIONAL EXTERIOR DOMAIN-----73
 早大・理工 柴田 良弘(Yoshihiro Shibata)
 一橋大・経済 山崎 昌男(Masao Yamazaki)
6. Semigroup for linearized free surface problem of viscous fluid-----92
 摂南大・工 寺本 恵昭(Yoshiaki Teramoto)
7. On steady surface waves over a rough periodic bottom
— relations between the pattern of imperfect bifurcation and
the shape of the bottom-----100
 九大・数理 井口 達雄(Tatsuo Iguchi)
8. HYDRODYNAMIC LIMITS OF SOME KINETIC EQUATIONS-----121
 Warsaw Univ. Mirosław Lachowicz
9. Stationary waves for the discrete Boltzmann equations in the half
space with reflection boundary conditions-----143
 福岡工業大・工 西畑 伸也(Shinya Nishibata)

10. Derivation of Hydrodynamic Limits from either the Liouville Equation or Kinetic Models: Study of an Example-----	154
京大・工学	青木 一生(Kazuo Aoki)
Univ. Paris W	Claude Bardos
Univ. Paris W	Francois Golse
京大・工学	曾根 良夫(Yoshio Sone)
11. Free Boundary Problem for the Equation of One-Dimensional Motion of Compressible Viscous Gas-----	182
山口大・工	岡田 真理(Mari Okada)
12. SMALL DIVISOR AND DISCRETE SHOCK PROFILE-----	198
阪大・理	Shih-Hsien Yu
