This is a report of research done at the Research Institute for Mathematical Sciences, Kyoto University. The papers contained herein are in final form and will not be submitted for publication elsewhere.

Preface

The RIMS Seminar “Representation spaces, twisted topological invariants and geometric structures of 3-manifolds” was held at Gora Seiunso, Hakone, Japan, during the period May 28 - June 1, 2012.

In this seminar there were 15 talks concerning with representation spaces, twisted topological invariants and their applications to geometric structures of 3-manifolds. Most of the papers in this volume are based on the talks.

On behalf of the organizers, I would like to thank all the participants and speakers. Masaaki Suzuki took care of most of the practical aspects of producing this volume. His devotion is highly appreciated. I would also like to express my sincere gratitude to the RIMS for support of the seminar and publication of the proceedings.
