- Problem.
- Semi-skyline augment filling.
- Main theorem.

## Cauchy identity

$$\prod_{(i,j) \in [n] \times [n]} (1 - x_i y_j)^{-1} = \sum_{\lambda \text{ partition} \in \mathbb{N}^n} s_{\lambda}(x) s_{\lambda}(y).$$

$$x = (x_1, \dots, x_n), y = (y_1, \dots, y_n)$$

## Definition

Let  $\lambda$  be a partition in  $\mathbb{N}^n$ . The Schur polynomial  $s_{\lambda}$  of shape  $\lambda$  in the variables  $x = (x_1, x_2, \dots, x_n)$  is

$$s_{\lambda}(x) = \sum_T x^T,$$

summed over all *SSYT*s of shape  $\lambda$  with entries in the alphabet  $[n]$ .

# Problem

$$\prod_{(i,j) \in [n] \times [n]} (1 - x_i y_j)^{-1} = \sum_{\substack{(P,Q) \text{ SSYT} \\ sh(P) = sh(Q) \\ cont(P), cont(Q) \in \mathbb{N}^n}} x^P y^Q = \sum_{\lambda \text{ partition} \in \mathbb{N}^n} s_\lambda(x) s_\lambda(y).$$

$$\prod_{(i,j) \in dg(n, n-1, \dots, 1)} (1 - x_i y_j)^{-1} = \prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{(P,Q) \in \mathcal{F}'} x^P y^Q.$$

$$\mathcal{F}' \subseteq \{(P, Q) \text{ SSYT}, sh(P) = sh(Q), cont(P), cont(Q) \in \mathbb{N}^n\}.$$

We want to characterize  $\mathcal{F}'$ .

## A non-symmetric Cauchy identity

Amy M. Fu, Alain Lascoux (2009) have proved in an algebraic way, using Demazure operators in type A:

$$\prod_{(i,j) \in dg(n, n-1, \dots, 1)} (1 - x_i y_j)^{-1} = \prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{\nu \in \mathbb{N}^n} \hat{K}_\nu(x) K_{\omega\nu}(y).$$

Demazure operator (isobaric divided difference) in type A

$$\pi_i : f \mapsto \pi_i(f) := \frac{x_i f - x_{i+1} s_i(f)}{x_i - x_{i+1}}, \quad 1 \leq i < n, \quad \widehat{\pi}_i := \pi_i - 1.$$

The Demazure character (key polynomials)  $K_{\sigma\lambda}$  corresponding to a partition  $\lambda$  and reduced decomposition of a permutation  $\sigma = s_{i_1} s_{i_2} \dots s_{i_k}$  is

$$K_{\sigma\lambda} = \pi_{i_1} \pi_{i_2} \dots \pi_{i_k}(x^\lambda).$$

$\widehat{K}_{\sigma\lambda}$  corresponding to a partition  $\lambda$  and reduced decomposition of a permutation  $\sigma = s_{i_1} s_{i_2} \dots s_{i_k}$  is

$$\widehat{K}_{\sigma\lambda} = \widehat{\pi}_{i_1} \widehat{\pi}_{i_2} \dots \widehat{\pi}_{i_k}(x^\lambda).$$

# Lascoux's combinatorial interpretation using double crystal graphs.

Lascoux has used the crystal version of RSK and the combinatorial interpretation of Demazure operators in terms of crystal operators.

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{\nu \in \mathbb{N}^n} \widehat{K}_\nu(x) K_{\omega\nu}(y).$$

*Double crystal graphs.*(2003)

# Lascoux's combinatorial interpretation using double crystal graphs.

Lascoux has used the crystal version of RSK and the combinatorial interpretation of Demazure operators in terms of crystal operators.

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{\nu \in \mathbb{N}^n} \widehat{K}_\nu(x) K_{\omega\nu}(y).$$

*Double crystal graphs.*(2003)

$$\prod_{(i,j) \in \text{dg}(n, n-1, \dots, 1)} (1 - x_i y_j)^{-1} = \prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{(P,Q) \in \mathcal{F}' } x^P y^Q.$$

$$\mathcal{F}' \subseteq \{(P, Q) \text{ SSYT}, \text{sh}(P) = \text{sh}(Q), \text{cont}(P), \text{cont}(Q) \in \mathbb{N}^n\}.$$

We want to characterize  $\mathcal{F}'$  in terms of semi-skyline augmented filling.

# Lascoux's combinatorial interpretation using double crystal graphs.

Lascoux has used the crystal version of RSK and the combinatorial interpretation of Demazure operators in terms of crystal operators.

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{\nu \in \mathbb{N}^n} \widehat{K}_\nu(x) K_{\omega\nu}(y).$$

*Double crystal graphs.*(2003)

$$\mathcal{F}' \subseteq \{(P, Q) \text{ SSYT}, sh(P) = sh(Q), cont(P), cont(Q) \in \mathbb{N}^n\}.$$

We want to characterize  $\mathcal{F}'$  in terms of semi-skyline augmented filling.

# Semi-skyline augmented filling. (Haglund, Haiman, Loehr, 2005)

Let  $\gamma = (\gamma_1, \gamma_2, \dots, \gamma_n) \in \mathbb{N}^n$ .

The *column diagram* of  $\gamma$  is a figure  $dg'(\gamma)$  consisting of  $n$  columns, with  $\gamma_i$  boxes in column  $i$ .

The *augmented diagram* of  $\gamma$  is a *column diagram* with a basement consisting of the numbers 1 through  $n$  in strictly increasing order, denoted by  $\widehat{dg}(\gamma)$ .

The *column diagram* and *augmented diagram* for  $\gamma = (1, 0, 3, 0, 1, 2, 0)$  are

$dg'(\gamma)$

$\widehat{dg}(\gamma)$

## The standardization of an augmented filling

## An inversion triple of type 1.

The triple  $\{a, b, c\}$  is an inversion triple of type 1 if and only if after standardization, the ordering from smallest to largest induces a counterclockwise orientation.

## An inversion triple of type 2.

The triple  $\{a, b, c\}$  is an inversion triple of type 2 if and only if after standardization, the ordering from smallest to largest induces a clockwise orientation.

## SSAF

A semi-skyline augmented filling (SSAF) is any augmented filling  $F$  that is weakly decreasing along columns, from bottom to top, and every triple is an inversion triple.

## An analogue of Schensted row insertion in SSAF.

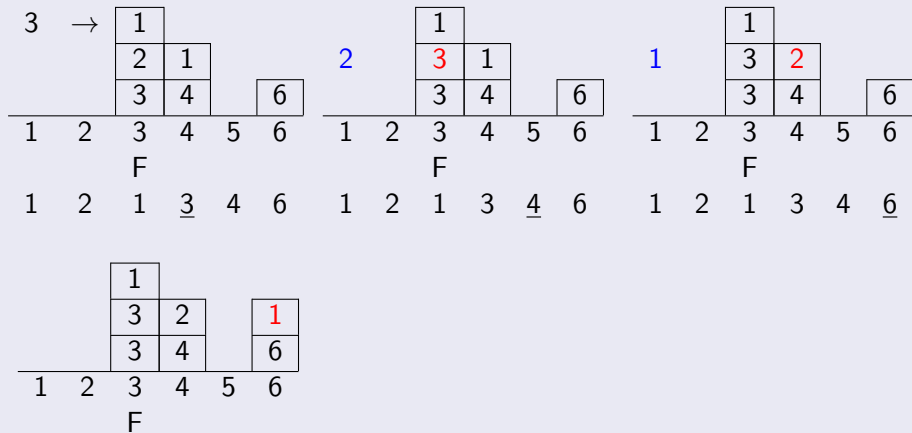

# An analogue of Schensted row insertion in SSAF.

## An analogue of Schensted row insertion in SSAF.

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

### Example

$$T = \begin{array}{cccc} & 4 & & \\ 2 & 5 & & \\ 1 & 3 & 3 & 3 \end{array} \quad \rightarrow \quad \text{col}(T) = 421 \ 53 \ 3 \ \underline{3}$$

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

### Example

$$T = \begin{array}{cccc} & 4 & & \\ 2 & 5 & & \\ 1 & 3 & 3 & 3 \end{array} \quad \rightarrow \quad \text{col}(T) = 421 \ 53 \ 3 \ \underline{3} \quad \rightarrow \quad \begin{array}{cccccc} & & \boxed{3} & & & \\ \hline 1 & 2 & 3 & 4 & 5 & \end{array}$$

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

### Example

$$T = \begin{array}{cccc} & 4 & & & \\ 2 & 5 & & & \\ 1 & 3 & 3 & 3 & \end{array} \quad \rightarrow \quad \text{col}(T) = 421 \ 53 \ 3 \ \underline{3} \quad \rightarrow \quad \begin{array}{cccccc} & & \boxed{3} & & & \\ \hline 1 & 2 & 3 & 4 & 5 & \end{array}$$

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

### Example

$$T = \begin{array}{cccc} & & & 4 \\ 2 & & 5 & \\ 1 & 3 & 3 & 3 \end{array} \rightarrow \text{col}(T) = 421 \ 53 \ 3 \ 3 \rightarrow \begin{array}{cccccc} & & & 3 & & \\ \hline 1 & 2 & 3 & 4 & 5 & \end{array}$$

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

### Example

$$T = \begin{array}{cccc} & 4 & & \\ 2 & 5 & & \\ 1 & 3 & 3 & 3 \end{array} \quad \rightarrow \quad \text{col}(T) = 421 \ 53 \ 3 \ 3 \rightarrow \frac{\quad \quad \quad \boxed{3} \quad \quad}{1 \quad 2 \quad 3 \quad 4 \quad 5}$$

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

### Example

$$T = \begin{array}{ccccc} & 4 & & & \\ 2 & 5 & & & \\ 1 & 3 & 3 & 3 & \end{array} \quad \rightarrow \quad \text{col}(T) = 421 \ 53 \ 3 \ 3 \rightarrow \frac{\quad \quad \quad \boxed{3} \quad \quad}{1 \quad 2 \quad 3 \quad 4 \quad 5}$$

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

### Example

$$T = \begin{array}{cccc} & 4 & & \\ 2 & 5 & & \\ 1 & 3 & 3 & 3 \end{array} \rightarrow \text{col}(T) = 421 \ 53 \ 3 \ 3 \rightarrow \begin{array}{cccccc} & & 3 & & & \\ \hline 1 & 2 & 3 & 4 & 5 & \end{array}$$

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

### Example

$$T = \begin{array}{cccc} & 4 & & \\ 2 & 5 & & \\ 1 & 3 & 3 & 3 \end{array} \rightarrow \text{col}(T) = 421 \ 53 \ 3 \ 3 \rightarrow \begin{array}{cccccc} & & 3 & & & \\ \hline 1 & 2 & 3 & 4 & 5 & \end{array}$$

A weight preserving, shape rearranging bijection between SSYT and SSAF. (S. Mason, 2008)

Example

$$T = \begin{array}{ccccc} & 4 & & & \\ 2 & 5 & & & \\ 1 & 3 & 3 & 3 & \end{array} \rightarrow \text{col}(T) = 421 \ 53 \ 3 \ 3 \rightarrow \frac{\quad \quad \quad \boxed{3} \quad \quad \quad}{1 \ 2 \ 3 \ 4 \ 5}$$

## Right key of SSYT (S.Mason 2009)

$$P(\text{SSYT}) \xrightarrow{\Psi} F(\text{SSAF}),$$
$$k_+(P) = \text{key}(\text{sh}(F)).$$

## Remark

The original definition of right key of a tableau is due to Lascoux and Schützenberger (1988).

An analogue of the RSK for semi-skyline augmented filling. (S.Mason 2008)

Bijection  $\Phi$  between words in commutative biletters and pairs  $(F, G)$  of semi-skyline augmented fillings whose shapes are rearrangements of the same partition.

## Example

$$w_A = \begin{pmatrix} 1 & 1 & 2 & 2 & 3 & 3 \\ 1 & 3 & 2 & 2 & 1 & 1 \end{pmatrix}$$

## Example

$$w_A = \begin{pmatrix} 1 & 1 & 2 & 2 & 3 & 3 \\ 1 & 3 & 2 & 2 & 1 & 1 \end{pmatrix} \rightarrow \begin{array}{ccc} \boxed{1} & & \\ \hline 1 & 2 & 3 \\ \text{F} & & \end{array} \quad \begin{array}{ccc} & & \boxed{3} \\ \hline 1 & 2 & 3 \\ & \text{G} & \end{array}$$

$$F = \begin{array}{ccc} \boxed{1} & & \\ \hline \boxed{1} & & \\ \hline 1 & 2 & 3 \end{array} \quad \begin{array}{ccc} & & \boxed{3} \\ \hline & & \boxed{3} \\ \hline 1 & 2 & 3 \end{array} = G$$

# Example

$$w_A = \begin{pmatrix} 1 & 1 & 2 & 2 & 3 & 3 \\ 1 & 3 & 2 & 2 & 1 & 1 \end{pmatrix} \rightarrow \begin{array}{c} \boxed{1} \\ 1 \quad 2 \quad 3 \\ \text{F} \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{3} \\ 1 \quad 2 \quad 3 \\ \text{G} \end{array}$$

$$F = \begin{array}{c} \boxed{1} \\ \boxed{1} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{3} \\ \quad \quad \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad F = \begin{array}{c} \boxed{1} \\ \boxed{1} \quad \boxed{2} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{3} \\ \quad \quad \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G$$

$$F = \begin{array}{c} \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{2} \quad \boxed{3} \\ \quad \quad \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G$$

# Example

$$w_A = \begin{pmatrix} 1 & 1 & 2 & 2 & 3 & 3 \\ 1 & 3 & 2 & 2 & 1 & 1 \end{pmatrix} \rightarrow \begin{array}{c} \boxed{1} \\ 1 \quad 2 \quad 3 \\ \text{F} \end{array} \quad \begin{array}{c} \boxed{3} \\ 1 \quad 2 \quad 3 \\ \text{G} \end{array}$$

$$F = \begin{array}{c} \boxed{1} \\ \boxed{1} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{3} \\ \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad F = \begin{array}{c} \boxed{1} \\ \boxed{1} \quad \boxed{2} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{3} \\ \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G$$

$$F = \begin{array}{c} \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{2} \quad \boxed{3} \\ \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad F = \begin{array}{c} \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{2} \quad \boxed{3} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G$$

# Example

$$w_A = \begin{pmatrix} 1 & 1 & 2 & 2 & 3 & 3 \\ 1 & 3 & 2 & 2 & 1 & 1 \end{pmatrix} \rightarrow \begin{array}{c} \boxed{1} \\ 1 \quad 2 \quad 3 \\ \text{F} \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{3} \\ 1 \quad 2 \quad 3 \\ \text{G} \end{array}$$

$$F = \begin{array}{c} \boxed{1} \\ \boxed{1} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{3} \\ \quad \quad \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad F = \begin{array}{c} \boxed{1} \\ \boxed{1} \quad \boxed{2} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{3} \\ \quad \quad \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G$$

$$F = \begin{array}{c} \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{2} \quad \boxed{3} \\ \quad \quad \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad F = \begin{array}{c} \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{2} \quad \boxed{3} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G$$

$$F = \begin{array}{c} \boxed{1} \\ \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \quad \quad \quad \boxed{1} \\ \quad \quad \quad \boxed{2} \quad \boxed{3} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad sh(F)^+ = sh(G)^+ = (3, 2, 1)$$

# Example

$$w_A = \begin{pmatrix} 1 & 1 & 2 & 2 & 3 & 3 \\ 1 & 3 & 2 & 2 & 1 & 1 \end{pmatrix} \rightarrow \begin{array}{c} \boxed{1} \\ 1 \quad 2 \quad 3 \\ \text{F} \end{array} \quad \begin{array}{c} \boxed{3} \\ 1 \quad 2 \quad 3 \\ \text{G} \end{array}$$

$$F = \begin{array}{c} \boxed{1} \\ \boxed{1} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{3} \\ \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad F = \begin{array}{c} \boxed{1} \\ \boxed{1} \quad \boxed{2} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{3} \\ \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G$$

$$F = \begin{array}{c} \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{2} \quad \boxed{3} \\ \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad F = \begin{array}{c} \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{2} \quad \boxed{3} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G$$

$$F = \begin{array}{c} \boxed{1} \\ \boxed{1} \quad \boxed{2} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} \quad \begin{array}{c} \boxed{1} \\ \boxed{2} \quad \boxed{3} \\ \boxed{1} \quad \boxed{2} \quad \boxed{3} \\ 1 \quad 2 \quad 3 \end{array} = G \quad sh(F)^+ = sh(G)^+ = (3, 2, 1)$$

$$sh(F)^+ = sh(G)^+ = sh(P) = sh(Q)$$

$$key(sh(F)) = k_+(P), \quad key(sh(G)) = k_+(Q)$$

$$cont(F) = cont(P), \quad cont(G) = cont(Q)$$

## Cauchy identity in terms of SSAF

$$\prod_{(i,j) \in [n] \times [n]} (1 - x_i y_j)^{-1} = \sum_{\substack{(F,G) \text{ SSAF} \\ sh(F)^+ = sh(G)^+ \\ cont(F), cont(G) \in \mathbb{N}^n}} x^F y^G$$

## Non-symmetric Cauchy kernel

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{(F,G) \in \mathcal{F}} x^F y^G$$

$$\mathcal{F} \subseteq \{(F, G) \text{ SSAF}, sh(F)^+ = sh(G)^+, cont(F), cont(G) \in \mathbb{N}^n\}.$$

## Non-symmetric Cauchy kernel in terms of SSYT

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{(P,Q) \in \mathcal{F}'} x^P y^Q = \sum_{(F,G) \in \mathcal{F}} x^F y^G$$

$\mathcal{F}' \subseteq \{(P, Q) \text{SSYT}, sh(P) = sh(Q), cont(P), cont(Q) \in \mathbb{N}^n\}$ .

$\mathcal{F} \subseteq \{(F, G) \text{SSAF}, sh(F)^+ = sh(G)^+, cont(F), cont(G) \in \mathbb{N}^n\}$ .

## Theorem (E.)

Let  $A$  be a biword in lexicographic order, let  $\Phi(A) = (F, G)$ . For each biletter  $\begin{pmatrix} i \\ j \end{pmatrix}$  in  $A$  we have  $i + j \leq n + 1$  if and only if  $\text{key}(sh(G)) \leq \text{key}(\omega sh(F))$ .

## Corollary

Let  $A$  be a biword in lexicographic order, let  $A \xrightarrow{RSK} (P, Q)$ .

For each biletter  $\begin{pmatrix} i \\ j \end{pmatrix}$  in  $A$  we have  $i + j \leq n + 1$  if and only if  $k_+(Q) \leq \text{evac}(k_+(P))$ .

$$k_+(Q) \leq \text{evac}(k_+(P)) \iff \text{key}(sh(G)) \leq \text{key}(\omega sh(F)).$$

$w$	$\Phi$	$(F, G)$	$\Psi$	$(P, Q)$
	$\leftrightarrow$		$\leftrightarrow$	
$i + j \leq n + 1$		$key(sh(G)) \leq key(\omega sh(F))$ $sh(F) = \alpha, sh(G) = \beta$ $key(\beta) \leq key(\omega\alpha)$ $\beta \leq_B \omega\alpha$		$K_+(P) = key(\alpha)$ $K_+(Q) = key(\beta)$ $key(\beta) \leq key(\omega\alpha)$ $K_+(Q) \leq evac(K_+(P))$

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{(F,G) \in \mathcal{F}} x^F y^G = \sum_{\nu \in \mathbb{N}^n} \sum_{\substack{(F,G) \in \text{SSAF} \\ \text{sh}(F) = \nu \\ \text{sh}(G) \leq \omega \nu}} x^F y^G.$$

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{(P,Q) \in \mathcal{F}' } x^P y^Q = \sum_{\nu \in \mathbb{N}^n} \sum_{\substack{(P,Q) \in \text{SSYT} \\ \text{sh}(P) = \text{sh}(Q) = \nu^+ \\ K_+(P) = \text{key}(\nu) \\ K_+(Q) = \text{key}(\beta) \\ \beta \leq \omega \nu}} x^P y^Q.$$

Or the shorter way:

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{\substack{(P,Q) \in \text{SSYT} \\ K_+(Q) \leq \text{evac}(K_+(P)) \\ \text{cont}(P), \text{cont}(Q) \in \mathbb{N}^n}} x^P y^Q.$$

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{(F,G) \in \mathcal{F}} x^F y^G = \sum_{\nu \in \mathbb{N}^n} \sum_{\substack{(F,G) \in \text{SSAF} \\ \text{sh}(F) = \nu \\ \text{sh}(G) \leq \omega \nu}} x^F y^G.$$

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{\nu \in \mathbb{N}^n} \sum_{\substack{(P,Q) \in \text{SSYT} \\ \text{sh}(P) = \text{sh}(Q) = \nu^+ \\ K_+(P) = \text{key}(\nu) \\ K_+(Q) = \text{key}(\beta) \\ \beta \leq \omega \nu}} x^P y^Q.$$

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum_{\nu \in \mathbb{N}^n} \hat{K}_\nu(x) K_{\omega \nu}(y).$$

## Combinatorial structure for key polynomials

$$K_\nu(x) = \sum_{\substack{P \text{ SSYT} \\ sh(P)=\nu^+ \\ K_+(P) \leq key(\nu)}} x^P = \sum_{\substack{F \text{ SSAF} \\ sh(F) \leq \nu}} x^F.$$

and

$$\widehat{K}_\nu(x) = \sum_{\substack{P \text{ SSYT} \\ sh(P)=\nu^+ \\ K_+(P)=key(\nu)}} x^P = \sum_{\substack{F \text{ SSAF} \\ sh(F)=\nu}} x^F.$$

Lascoux and Schützenberger have studied the combinatorial structure of Key polynomials in terms of SSYT in (1988) and S.Mason has studied it in terms of SSAF in (2009).

## Theorem (E.)

Let  $A$  be a biword in lexicographic order, let  $\Phi(A) = (F, G)$ . For each biletter  $\begin{pmatrix} i \\ j \end{pmatrix}$  in  $A$  we have  $i + j \leq n + 1$  if and only if  $\text{key}(sh(G)) \leq \text{key}(\omega sh(F))$ .

### sketch of proof:

By induction on the number of biletters in  $A$  and using lemma below:

## Lemma

Given a partition  $\lambda$ , let  $\alpha = (\alpha_1, \alpha_2, \dots, \alpha_n)$  and  $\beta = (\beta_1, \beta_2, \dots, \beta_n)$  be two rearrangements of  $\lambda$ , such that  $\text{key}(\beta) \leq \text{key}(\alpha)$ .

Let  $k, k' \in \{1, \dots, n\}$  such that  $\beta_{k'}$  is the first entry of  $\beta$  such that  $\alpha_k = \beta_{k'}$ . If  $\alpha' = (\alpha_1, \alpha_2, \dots, \alpha_k + 1, \dots, \alpha_n)$  and  $\beta' = (\beta_1, \beta_2, \dots, \beta_{k'} + 1, \dots, \beta_n)$ , then  $\text{key}(\beta') \leq \text{key}(\alpha')$

$$\Omega^A := \frac{1}{\prod_{i+j \leq n+1} (1 - x_i y_j)} = \sum_{\nu \in \mathbb{N}^n} \hat{K}_\nu(x) K_{\omega\nu}(y),$$

$$\Omega^B := \frac{\prod_{1 \leq i < j \leq n} (1 - x_i x_j) \prod_{i=1}^n (1 + x_i)}{\prod_{i,j=1}^n (1 - x_i y_j) \prod_{i=1}^n \prod_{j=i}^n (1 - \frac{x_i}{y_j})} = \sum_{\nu \in \mathbb{N}^n} \hat{K}_\nu(x) K_{-\nu}^B(y),$$

$$\Omega^C := \frac{\prod_{1 \leq i < j \leq n} (1 - x_i x_j)}{\prod_{i,j=1}^n (1 - x_i y_j) \prod_{i=1}^n \prod_{j=i}^n (1 - \frac{x_i}{y_j})} = \sum_{\nu \in \mathbb{N}^n} \hat{K}_\nu(x) K_{-\nu}^C(y),$$

**THANK YOU**

# Proof by Lascoux

Let  $\Xi_n := \sum_{\sigma \in S_n} \hat{\pi}_\sigma^x \pi_{\omega\sigma}^y$ .

$$\Xi_n = \frac{1}{(1 - x_1 y_1)(1 - x_1 x_2 y_1 y_2) \dots (1 - x_1 \dots x_n y_1 \dots y_n)} = \frac{1}{\prod_{i+j \leq n+1} (1 - x_i y_j)}$$

as

$$\frac{1}{(1 - x_1 y_1)(1 - x_1 x_2 y_1 y_2) \dots (1 - x_1 \dots x_n y_1 \dots y_n)}$$

is the generating function of dominant monomials  $x^\lambda y^\lambda$  in  $n$  variables  $x_1 y_1, \dots, x_n y_n$ ,

$$\prod_{i+j \leq n+1} (1 - x_i y_j)^{-1} = \sum x^\lambda y^\lambda \Xi_n = \sum_{\sigma \in S_n} \hat{\pi}_\sigma^x(x^\lambda) \pi_{\omega\sigma}^y(y^\lambda) = \sum_{\nu \in \mathbb{N}^n} \hat{K}_\nu(x) K_{\omega\nu}(y)$$
