

Preface

The RIMS workshop “Algebraic Number Theory and Related Topics 2013” was held at Research Institute for Mathematical Sciences, Kyoto University from December 9 to December 13, 2013. The workshop was organized by Tadashi Ochiai (Osaka University), Takeshi Tsuji (University of Tokyo) and Iwao Kimura (University of Toyama).

The aim of the workshop was to overview recent developments in diverse branches related to algebraic number theory. There were research talks on Iwasawa theory, l -adic Galois representations, modular forms, p -adic Hodge theory, algebraic cycles and so on. We also invited several speakers to give survey talks on recent developments in number theory. The conference program included 28 talks and we had 169 participants during the conference.

This volume of RIMS Kôkyûroku Bessatsu edited by the three organizers is a collection of articles contributed by speakers of the conference. They are classified into three categories following the views of the authors and the anonymous referees: research articles, research announcements and survey articles. Each paper has been refereed and is in its final form.

We would like to express our gratitude to participants, speakers and everyone who contributed to the success of the conference. We would also like to express our sincere gratitude to the authors and the anonymous referees of the articles of this volume for their excellent jobs on a tight schedule.
