非線形波動の数理

(Jan. 9-12, 1978)

"Theory of Nonlinear Waves"

研究代表者 戸田盛和

1978.22

Contents

1. M. Toda, Introduction: Three-Particle Systems.....1

2. R. Hirota, Exact Solutions to Nonlinear Difference Equations.....7

3. J. Ford, A Picture Book of Stochasticity.....11

4. Y. Kodama and T. Taniuti, Higher Order Approximation in the Reductive Perturbation Method for the Weakly Dispersive System 37

5. T. Kakutani and N. Yamasaki, Solitary Waves on a Two-Layer Fluid.....66

6. F. Kako and N. Mugibayashi, Complete Integrability of Nonlinear Differential-Difference Equations.....81

7. J. Satsuma, Solitons and Rational Solutions of Nonlinear Evolution Equations.....104

8. E. Date, Quasi-Periodic Solutions of the Sine-Gordon Equation and the Massive Thirring Model.....115

9. T. Kotera, K. Sawada and S. Yamazaki, Finite Toda Lattice..125

10. Y.H. Ichikawa, Remarks on the Theory of Perturbed Solitons.131

11. K. Konno and H. Suzuki, Self-Focusing of Laser Beams in Nonlinear Media.....146

12. N. Yajima, Scattering of Lattice Solitons from a Mass Impurity.....157

13. W.E. Ferguson,Jr., H. Flaschka and D.W. McLaughlin, Concrete Periodic Inverse Spectral Transform.....171

14. S. Watanabe, Nonlinear Dispersive Wave with Weak Dissipation.....231

15. N. Saito and H. Hirooka, Billiard Problem between Two Eccentric Circles.....239
