Type Theory and its Applications  
to Computer Systems

January, 1998

Research Institute for Mathematical Sciences

Kyoto University, Kyoto, Japan

Type Theory とそのコンピュータシステムへの応用  
Type Theory and its Applications to Computer Systems  
研究集会報告集

1997年 9月19日～ 9月21日  
研究代表者 Jacques Garrigue

目 次

1. Towards a Higher Order Unification Based on Proof Nets-----	1
名工大・工                松岡    聡(Satoshi Matsuoka)	
2. Recursive Types: the syntactic and semantic approaches-----	16
Univ. di Torino    Mario Coppo	
3. A Classical Catch/Throw Calculus with Tag Abstractions and its Strong Normalizability-----	42
京大・工                亀山    幸義(Yukiyoshi Kameyama)	
京大・工                佐藤    雅彦(Masahiko Sato)	
4. Completeness Proofs for Linear Logic Based on the Proof Search Method (Preliminary Report)-----	57
慶応大・文                岡田    光弘(Mitsuhiro Okada)	
慶応大・文                照井    一成(Kazushige Terui)	
5. A Typed Context Calculus-----	76
京大・数理研                橋本    政朋(Masatomo Hashimoto)	
京大・数理研                大堀    淳(Atsushi Ohori)	
6. SN Combinators and Partial Combinatory Algebras-----	92
東大・理                赤間    陽二(Yohji Akama)	
7. Subtyping and Inheritance for Categorical Datatypes (Preliminary Report)-----	112
Univ. of Kent                Erik Poll	
8. Static Typing for Dynamic Messages-----	126
京大・数理研                西村    進(Susumu Nishimura)	
9. Simplification of Subtyping Constraints and Its Application for Monadic Programming-----	142
香川大・工                香川    考司(Koji Kagawa)	
10. Other papers presented at the Workshop-----	156
