## Preface

This volume is a collection of papers presented at the symposium on mathematical economics sponsored by the Research Institute for Mathematical Sciences, Kyoto University, which was held during December 2~4, 1998.

On behalf of the programme committee, I would like to extend my cordial thanks to all the participants of the symposium for their sincere and constructive contributions to our project.

We can safely say that mathematical reasonings have been playing a much more indispensable role in economic theory than in any other discipline of social sciences. There seems to be several reasons which have endowed economic theory with peculiar mathematical characters.

First of all, many economic phenomena permit expressions in terms of quantitative languages.

We have also to take account of the fact that an economy consists of a huge number of sectors which are entangled in a complex manner. Economic phenomena result from the interactions of these interdependent component sectors. Their mutual relation is so complicated that an ordinary language and a casual way of thinking have only very limited abilities to describe and analyze economic phenomena. It is quite easy for anyone to imagine serious confusions which would result if we had recourse exclusively to ordinary languages and casual reasonings. Although mathematical reasonings may sometimes seem too round-about for our purposes, it certainly provides economists with simple and efficient analytical weapons.

Furthermore economists have been suffering from the difficulty of controlled experiments in their researches. That is exactly why much importance has been attached to rigorous speculative experiments in economic theory. So called "axiomatic method" developed in Vienna during the inter-war period should be regarded as being promoted by the same view and recognition under the influence of D.Hilbert.

I would be pleased very much if our symposium could contribute to widening and deepening of the mathematical foundations in economic theory.

目 次

I. Convex Analysis and Optimization	
1. Fixed Point Theorems and Related Topics in Abstract Convex Spaces-----1	慶應義塾大・商 小宮 英敏(Hidetoshi Komiya)
2. FIXED POINT THEOREMS AND THE EXISTENCE OF ECONOMIC EQUILIBRIA BASED ON CONDITIONS FOR LOCAL DIRECTIONS OF MAPPINGS-----12	阪大・経済 浦井 憲(Ken Urai)
3. A Priori and a Posteriori Conditional Decision Processes with Nonadditively Recursive Utility-----29	九大・経済 岩本 誠一(Seiichi Iwamoto)
4. NON-HILBERT CONDITIONING AND VALUE OF INFORMATION-----44	東北大・経済 尾崎 裕之(Hiroyuki Ozaki)
II. Networks and Graphs of an Economy	
5. On the Efficiency and Stability of Networks-----62	慶應義塾大・経済 川又 邦雄(Kunio Kawamata)
6. On the Formation and Stability of Networks-----82	慶應義塾大・経済 山方 竜二(Ryuji Yamagata)
7. Efficiency of Stochastic Transfers in a Directed Graph-----89	一橋大・経済 山崎 昭(Akira Yamazaki)
III. Aspects of Equilibrium Theory	
8. Lipschitzian Error Bounds of Multi-Item Auction Procedures-----106	東北大・経済 三宅 光展(Mitsunobu Miyake)
9. Pareto Optimum Allocations in the Economy with Clubs-----122	一橋大・経済 武隈 慎一(Shin-ichi Takekuma)

IV. Game Theory

10. Nash Equilibrium as Conjectures in Public Belief-----136  
茨城工業高専 松久 隆(Takashi Matsuhisa)
11. The Core of an Economy with a Common Pool Resource:  
A Partition Function Form Approach-----150  
早大・政治経済 船木由喜彦(Yukihiko Funaki)  
都立大・経済 大和 毅彦(Takehiko Yamato)
12. Morally Consistent Equilibria in Normal Form Games: A Game Theoretic  
Approach to Moral Judgements and a Normative Justification of  
Nash Equilibrium-----169  
関西大・経済 長久 領 彦(Ryo-ichi Nagahisa)  
福岡大・経済 須賀 晃一(Koichi Suga)
13. Social Development Promoted by Cooperation: A Simple Game Model----198  
京大・経済研 岡田 章(Akira Okada)

V. Historical Perspective

14. Mathematical Economics in Vienna between the Wars:  
Wald's Existence Proof-----214  
防衛大学校 武藤 功(Isao Mutoh)

VI. 特別講演

15. 日本の文系大学生の数学力-----231  
慶應義塾大・経済 戸瀬 信之(Nobuyuki Tose)  
京大・経済研 西村 和雄(Kazuo Nishimura)
