## Preface

This volume contains the proceedings of the lectures delivered at the conference, *Viscosity Solution Theory of Differential Equations and its Developments*, held at the Research Institute for Mathematical Sciences, Kyoto University, during July 12-14, 2004. All the papers are concerned with recent developments in the theory of viscosity solutions and related topics in nonlinear partial differential equations.

The conference was possible by support from the Research Institute for Mathematical Sciences. Also, financial support from the Japan Society for the Promotion of Science through its Grant-in-Aid for Scientific Research was helpful for making the conference successful. I wish to thank the Research Institute for Mathematical Sciences and the Japan Society for the Promotion for their support and all those who cooperated to publish this volume.

 研究集会報告集

2004年7月12日～7月14日

研究代表者 小池 茂昭 (Shigeaki Koike)

副代表者 石井 仁司 (Hitoshi Ishii)

" 儀我 美一 (Yoshikazu Giga)

目 次

1.	Perron's method — revisited — -----	1
	埼玉大・理 小池 茂昭(Shigeaki Koike)	
2.	Inf-sup type differential games and Isaacs equations: dynamic programming approach -----	9
	名大・情報科学 貝瀬 秀裕(Hidehiro Kaise)	
3.	Regularity and speed of the Hele-Shaw flow -----	19
	MIT Inwon Kim	
4.	Local estimates and Maximum Principle for fully nonlinear equations in unbounded domains -----	28
	Univ. di Roma "La Sapienza" Fabiana Leoni	
5.	RECENT ADVANCES IN THE THEORY OF HOMOGENIZATION FOR FULLY NONLINEAR FIRST- AND SECOND-ORDER PDE IN STATIONARY ERGODIC MEDIA -----	36
	Univ. of Texas at Austin Panagiotis E. Souganidis	
6.	Viscosity solutions with shocks for second order equations -----	41
	東大・数理科学 儀我 美一(Yoshikazu Giga)	
	Univ. of Sussex 鹿島 洋平(Yohei Kashima)	
	室蘭工大 佐藤 元彦(Moto-hiko Sato)	
7.	Relaxation in the Cauchy problem for Hamilton-Jacobi equations -----	58
	早大・教育・総合科学 石井 仁司(Hitoshi Ishii)	
	Univ. di Roma "La Sapienza" Paola Loreti	
8.	A Stefan type problem arising in modeling ice crystals growing from vapor -----	72
	東大・数理科学 儀我 美一(Yoshikazu Giga)	
	Warsaw Univ. Piotr Rybka	
9.	On Bellman equations of ergodic type with the Ornstein-Uhlenbeck operator -----	84
	富山大・理 藤田 安啓(Yasuhiro Fujita)	

1 0.	Singular sets for curvature equations of order $k$ -----	91
	広島大・理学	滝本 和広(Kazuhiro Takimoto)
1 1.	Duality in Stochastic Optimal Control and Applications -----	106
	北大・理学	三上 敏夫(Toshio Mikami)
	Univ. Paris VI	Michèle Thieullen
1 2.	A deterministic-control-based approach to motion by curvature -----	120
	New York Univ.	Robert V. Kohn
	"	Sylvia Serfaty
1 3.	On singular vertical diffusion for some Hamilton-Jacobi equations -----	131
	東大・数理科学	儀我 美保(Mi-Ho Giga)
	"	儀我 美一(Yoshikazu Giga)
1 4.	A NOTE ON THE HOMOGENIZATION OF FULLY NONLINEAR DEGENERATE ELLIPTIC EQUATIONS -----	143
	早大・教育・総合科学	石井 仁司(Hitoshi Ishii)
