COMMENTS ON “THE ABSOLUTE ANABELIAN
GEOMETRY OF HYPERBOLIC CURVES”

Shinichi Mochizuki

May 2013

(1.) The assumption of the existence of a splitting over some open subgroup in the discussion preceding Lemma 1.1.4 is, in fact, unnecessary, at least in the context of Lemma 1.1.4. Indeed, this assumption is never applied in the proof of Lemma 1.1.4, (i). In the proof of Lemma 1.1.4, (ii), this assumption is applied; on the other hand, the application of this assumption may be circumvented by applying instead the well-known fact that \( H^2(G, \hat{\mathbb{Z}} \otimes_{\mathbb{Z}} \mathbb{Q}) = 0 \).
