

COMMENTS ON “THE GEOMETRY OF THE
COMPACTIFICATION OF THE HURWITZ SCHEME”

SHINICHI MOCHIZUKI

August 2017

(1.) In the statement of the Theorem of §3.22, the definition of the morphisms of the stack under consideration is only given explicitly in the case where the domain and codomain of the morphism are *identical*; in fact, however, the definition should [and, indeed, can easily] be given for morphisms for which the domain and codomain of the morphism are *not necessarily identical*.

(2.) In §4.6, (2), (B), β), the phrase “*ramification*)going” should read “*ramification*)going”.

(3.) In the illustration given in the Pictorial Appendix for Species 3B*, the lowest irreducible component on the right-hand side of the domain curve of the covering [i.e., the irreducible component marked by the phrase “one copy of \mathbb{P}^1 ”] should be *deleted*.
