## CONTENTS

11. Hidetoshi Tahara, Coupling of two partial differential equations and its application, II — the case of Briot-Bouquet type PDEs —. ................................. 393
13. Michael Skeide, Unit vectors, Morita equivalence and endomorphisms. ......................................................... 475
14. Alberto Ibort, Pablo Linares and José G. Llavona, On the representation of orthogonally additive polynomials in \( \ell_p \). .................. 519
15. Julius Borcea, Rikard Bøgvad and Boris Shapiro, Homogenized spectral problems for exactly solvable operators: Asymptotics of polynomial eigenfunctions ...... 525
16. Sheng-Ming Ma, Resolution of operator singularities via the mixed-variable method. ................................. 569
17. Toshiaki Hattori, The essential spectrum of the Laplacian on manifolds with ends. ................................. 601
18. Tristan Torrelli, Intersection homology \( \mathcal{D} \)-module and Bernstein polynomials associated with a complete intersection. ................................................. 645
