有良工専 北川 誠之助

§ 1 總

ここでは、A. Connes の $T(M)$ に関する結果の一部を紹介します。記号 : M, N : Neumann algebra

Ψ, Φ : M 上の normal semi-finite faithful weight (スは state) 以下 τ は weight (スは state) は全て normal semi-finite faithful なものとする

$$\mathcal{M}_\Psi = \{x + M : \Psi(x^*x) < \infty\}$$

$$\mathcal{M}_\Phi = \{x^*y : x, y \in \mathcal{M}_\Psi\}$$

$\pi_\tau^\Psi : \Psi \mapsto \tau$ は modular automorphism

$$M_\tau = \{x : \pi_\tau^\Psi(x) = x\}$$

§ 2

定理 1 4.4 : M 上の weight

$t \mapsto u_t \in M_u$: strongly conti. mapping

$$\pi_t^\Psi(x) = (u_t \pi_\tau^\Psi(u_t)) u_t^* \quad \forall x \in M$$

証明 $\bar{F}_2 = \{2 \times 2\text{-matrix } \theta \text{ と } \}$

$$\theta (\sum x_{ij} \otimes e_{ij}) \stackrel{\text{def}}{=} \varphi(x_{11}) + \varphi(x_{12}) \quad \sum x_{ij} \otimes e_{ij} \in (M \otimes F_2)$$

$$M \in \sum x_{ij} \otimes e_{ij} \Leftrightarrow x_{ii} \in M_\Phi, x_{i2} \in M_\Psi \quad (i=1,2)$$

θ が M の \bar{F}_2 の weight にたずさわる事は容易にわかる。

$f_j = 1 \otimes e_{jj} \quad (j=1,2)$ が $(M \otimes F_2)_G$ に含まれることを示す。

ちよかず $\bar{f}_i^\theta(f_j) = f_j \quad (i=1,2)$ を示す。

[1] $i=F$) 次の事を示せば十分である。

$$f_j \in M_\theta \subset M_\Theta \quad M_\Theta \cdot f_j \in M_\Theta \quad (j=1,2)$$

$$\theta(f_j \cdot a) = \theta(a \cdot f_j) \quad \forall a \in M_\Theta \quad (j=1,2)$$

しかも、容易に計算できるので、計算省略する。

$$\bar{f}_i^\theta(x \otimes e_{11}) = \sum x_{ij} \otimes e_{ij} \text{ とすると}$$

$$(1 \otimes e_{11}) \bar{f}_i^\theta(x \otimes e_{11}) = \bar{f}_i^\theta(x \otimes e_{11}) = \bar{f}_i^\theta(x \otimes e_{11})(1 \otimes e_{11})$$

$$c = (1 \otimes e_{22})(\bar{f}_i^\theta(x \otimes e_{11})) = \bar{f}_i^\theta(x \otimes e_{11})(1 \otimes e_{22})$$

$$\therefore \exists f_i(x) \in M \quad \bar{f}_i^\theta(x \otimes e_{11}) = f_i(x) \otimes e_{11} \text{ とある。}$$

$x \rightarrow f_i(x) = \text{strongly conti. one-parameter group of automorphisms in } M$.

$x \rightarrow f_i(x) = \text{関数 } \varphi \text{ の K.M.S. 条件を満足する} \Rightarrow$ 示す。

$$\varphi(f_i(x^*x)) = \theta(\bar{f}_i^\theta(x^*x) \otimes e_{11}) = \theta(x^*x \otimes e_{11}) = \varphi(x^*) \otimes e_{11}$$

$$\forall a, b \in M_\Phi$$

$$\varphi(f_i(a)b) = \varphi(f_i(a)b \otimes e_{11}) = \theta(\bar{f}_i^\theta(a \otimes e_{11}) \cdot b \otimes e_{11})$$

$$\varphi(b \Gamma_t(a)) = \Theta(b \otimes e_{11}, \overline{\Gamma}_t^\theta(a \otimes e_{11}))$$

$\overline{\Gamma}_t^\theta$ が Θ に 関する K.M.S 条件を満たすことより

$${}^3\bar{F}(z) = \text{local analytic} \quad 0 < \text{Im } z < 1, \text{ Lcont } \quad 0 \leq \text{Im } z \leq 1$$

$$\bar{F}(z) = \Theta(\overline{\Gamma}_t^\theta(a \otimes e_{11}), b \otimes e_{11}) = \varphi(\Gamma_t(a)b)$$

$$\bar{F}(t+i) = \Theta(b \otimes e_{11}, \overline{\Gamma}_t^\theta(a \otimes e_{11})) = \varphi(b \Gamma_t(a))$$

したがって K.M.S 条件の一意性に従う

$$\Gamma_t(x) = \overline{\Gamma}_t^\varphi(x) \quad \forall x \in M.$$

$$\therefore \overline{\Gamma}_t^\theta(x \otimes e_{11}) = \Gamma_t(x) \otimes e_{11} = \overline{\Gamma}_t^\varphi(x) \otimes e_{11}$$

$$\text{同様に} \quad \overline{\Gamma}_t^\theta(x \otimes e_{22}) = \overline{\Gamma}_t^\varphi(x) \otimes e_{22} \quad \forall x \in M.$$

$$(1 \otimes e_{22}) \overline{\Gamma}_t^\theta(1 \otimes e_{21}) = \overline{\Gamma}_t^\theta(1 \otimes e_{21}) = \overline{\Gamma}_t^\theta(1 \otimes e_{21})(1 \otimes e_{11})$$

$$0 = (1 \otimes e_{11}) \overline{\Gamma}_t^\theta(1 \otimes e_{21}) = \overline{\Gamma}_t^\theta(1 \otimes e_{21}) 1 \otimes e_{22}$$

$$\text{よし} \quad \overline{\Gamma}_t^\theta(1 \otimes e_{21}) = u_t \otimes e_{21} \quad u_t \in M. \quad \text{と} \quad t \neq 0$$

$$u_t^* u_t \otimes e_{11} = \overline{\Gamma}_t^\theta(1 \otimes e_{11}) = 1 \otimes e_{11}$$

$$u_t u_t^* \otimes e_{22} = \overline{\Gamma}_t^\theta(1 \otimes e_{22}) = 1 \otimes e_{22} \quad \text{よし}. \quad u_t \text{ is unitary operator.}$$

$$(u_t \otimes e_{21})(\overline{\Gamma}_t^\varphi(x) \otimes e_{11})(u_t^* \otimes e_{12}) = \overline{\Gamma}_t^\theta(1 \otimes e_{21}) \overline{\Gamma}_t^\theta(x \otimes e_{11}) \overline{\Gamma}_t^\theta(1 \otimes e_{12})$$

$$= \overline{\Gamma}_t^\theta(x \otimes e_{22}) = \overline{\Gamma}_t^\varphi(x) \otimes e_{22}$$

$$\therefore u_t \overline{\Gamma}_t^\varphi(x) u_t^* = \overline{\Gamma}_t^\varphi(x) \quad \forall x \in M. \quad \text{8.e.} \quad \text{OK}$$

定理 1 で求めた $u_t \in (D\varphi; D\varphi)_t$ に書く

$(D\varphi, D\varphi)_t$ は次の様な性質を持つ。

Lemma 1) ~~$\varphi, \varphi_1, \varphi_2, \varphi_3$~~ $\varphi, \varphi_1, \varphi_2, \varphi_3$ weight

$$i) (D\varphi_1 : D\varphi_2)_t (D\varphi_2 : D\varphi_3)_t = (D\varphi_1 : D\varphi_3)_t.$$

ii) $\varphi = \mathbb{T}_t^\varphi -$ invariant weight

[1] $\exists k \in M_\varphi \quad k \geq 0$

$\varphi(x) = \varphi(hx)$ を表す たとえ式

$(D\varphi : D\varphi)_t = h^{it}$ と T_3 は。

iii) $u \in M_u \quad \varphi_u \stackrel{\text{def}}{=} \varphi(uhu^*)$

$$\mathbb{T}_t^\varphi(u) = u(D\varphi_u = D\varphi)_t$$

$$(*IV) (D\varphi = D\varphi)_{t_1+t_2} = (D\varphi : D\varphi)_{t_1} \mathbb{T}_{t_1}^\varphi ((D\varphi = D\varphi)_{t_2})$$

証明はいすれも簡単に計算出来るので、略す。

今度は、逆に $(D\varphi : D\varphi)_t$ は (*I) に \mathbb{T}_t^φ characterization たとえ式を示す。

定理 2 $t \rightarrow u_t \in M_u$: strongly cont. mapping.

内を満たす すなはち $u_{t_1+t_2} = u_{t_1} \mathbb{T}_{t_1}^\varphi(u_{t_2})$ ならば。

$$^3 \varphi = \text{weight} \quad s + (D\varphi = D\varphi)_t = u_t$$

証明 [first step] $F_\omega \stackrel{\text{def}}{=} B(L^2(R))$ [1] は トリ、次の事を解き、ついで。

$$^3 w = \text{weight on } F_\omega \quad s + \mathbb{T}_t^\omega(x) = u_t x u_t^* : (u_t f)(s) = f(s-x) \quad \forall f \in L^2(R)$$

$$\bar{\omega} \stackrel{\text{def}}{=} \varphi \otimes w : \text{weight on } \overline{F_\omega \otimes M} \otimes F_\omega$$

$$^3 V \in (M \otimes F_\omega)_u \quad s + u_t \otimes 1 = V \mathbb{T}_t^{\bar{\omega}}(V^*) \quad \text{ある事を示す。}$$

$$I : \mathcal{H}_\varphi \otimes L^2(R) \rightarrow \mathbb{C} \otimes \mathbb{C} \longrightarrow f(t) ; \in L^2(R, \mathcal{H}_\varphi)$$

上り、 $\mathbb{C} \otimes \mathcal{H}_\varphi \otimes L^2(R)$ と $L^2(R, \mathcal{H}_\varphi)$ は同一視する。

$$W = L^2(\mathbb{R}, \mathcal{H}_\varphi) \ni \omega_t \longrightarrow \pi_\varphi(u_t)\omega_t \in L^2(\mathbb{R}, \mathcal{H}_\varphi)$$

W : unitary operator $\Rightarrow \|W\| \in \pi(M \otimes F_\infty)$ たゞ 事は 簡易に
解かる。

$$\exists V : \text{unitary } \in M \otimes F_\infty \text{ s.t. } (\pi_\varphi \otimes 1)(V) = I^\dagger W I$$

V を むめる ものであることは、簡易に計算出来る。

$$[\text{Step II}] \quad i) \Phi(x) \stackrel{\text{def}}{=} \bar{\omega}(V^* x V) = \text{weight} \text{ on } M \otimes F_\infty$$

$$\pi_t^F(x \otimes y) = u_t \pi_t^\varphi(x) u_t^* \otimes \pi_t^\omega(y) \quad \forall x \in M, \forall y \in F_\infty$$

$$ii) \quad a \in F_\infty, a > 0 \quad \omega(a) < \infty \quad \text{とす}$$

$$\Phi(x) \stackrel{\text{def}}{=} \Phi(x \otimes a) \quad x \in M+ \quad \text{とす}$$

$$\Phi = \text{weight} \text{ on } M$$

証明 i) Lemma 1.5.1

$$\begin{aligned} \pi_t^F(x \otimes y) &= V \pi_t^{\bar{\omega}}(V^*) \pi_t^{\bar{\omega}}(x \otimes y) \pi_t^{\bar{\omega}}(V) V^* = (u_t \otimes 1) \pi_t^{\bar{\omega}}(x \otimes y) (u_t^* \otimes 1) \\ &= (u_t \pi_t^\varphi(x) u_t^*) \otimes \pi_t^\omega(y) \end{aligned}$$

$$ii) \quad \forall x \in M+, \quad \varphi(x) < \infty$$

$$b \stackrel{\text{def}}{=} \int f(t) u_t dt \quad \text{とす} \quad \left\langle b \otimes b^* \right\rangle < \infty \text{ たゞ 事を 示す。}$$

$$\text{証 1. } \quad f \in L^1 \quad \hat{f} \in C_0$$

$$\Phi(b \otimes b^*) = \bar{\omega}(V^*(b \otimes b^* \otimes a)V) = \bar{\omega}(V^*(b \otimes 1)(x \otimes a)(b^* \otimes 1)V)$$

$$[1] \quad 1 = f(1).$$

$$\bar{\omega}(V^*(b \otimes 1)(x \otimes a)(b^* \otimes 1)V) < \infty \text{ と 示すには。}$$

$$V^*(b \otimes 1) \text{ が } \pi_t^{\bar{\omega}}-\text{analytic} \text{ を示せば} \text{ 十分。}$$

$$V^* \int f(t)(u_t \otimes 1) dt = V^* \int f(t) V \pi_t^{\bar{\omega}}(V^*) dt = \int f(t) \pi_t^{\bar{\omega}}(V^*) dt.$$

$\therefore \hat{f} \in C_0(\Gamma)$ $\quad V^*(b \otimes 1) \text{ IT } \overline{\mathcal{T}_t^w}$ -analytic

$\forall b \in \mathcal{N}_4 \quad \tau \cdot t \in L \quad \hat{f} \in C_0(\mathbb{R}) \text{ すなはち}$

$\mathcal{N}_4 = \text{weakly dense}$

$\therefore A$ - semi-finite.

* normal, fact fed to \Rightarrow は明示的

A IT $M \otimes N$ weight.

Step IV). M, N : Neumann algebras

Φ = weight on $M \otimes N$ $\in \mathcal{L}$.

$$\overline{\mathcal{T}_t^{\Phi}}(M \otimes 1) = M \otimes 1$$

$a \in N_+$ $\varphi(x) \stackrel{\text{def}}{=} \Phi(x \otimes a)$ Φ weight in $M \otimes N$

$$\overline{\mathcal{T}_t^{\Phi}}(x \otimes 1) = \overline{\mathcal{T}_t^{\Phi}}(x \otimes 1) \quad \forall x \in M$$

証明.

Lemma 2 $\mathbb{C} \ni z \longrightarrow x(z) \in M$: analytic

Ψ : weight on M .

$\exists x \in M$: ~~analytic~~ \mathcal{T}_t -analytic.

$$\mathcal{T}_z(x) = x(z)$$

\iff i) $\forall t_1 > 0 \quad \exists t_2 > 0 \quad \text{s.t.}$

$$|\operatorname{Im} z| < t_1 \quad a \in M_{t_1} \Rightarrow \varphi(x(z)) \varphi(x(z)^*) \leq t_2 \varphi(a) \\ \varphi(x^*(z)) \varphi(x(z)^*) \leq t_2 \varphi(a)$$

ii) $\forall a \in M_{t_1} \quad z \rightarrow \varphi(x(z)a) \quad \left\{ \begin{array}{l} \text{holomorphic} \\ z \rightarrow \varphi(a)x(z) \end{array} \right.$

$$\varphi(x(z+\cdot)a) = \varphi(a \times (z))$$

Lemma 2 \Rightarrow 1月17日 7月 23

$\tau_t(x) \stackrel{\text{def}}{=} \tau_t^{\varphi}(x)$ $\forall x \in M$. $\tau_t(x)$ is strongly conti one-parameter group of automorphisms

$$\int f(t) \tau_t^{\varphi}(x) dt = \sigma(x) \in M, f \in L^1, \sigma \in C_c : \text{weakly dense in } M$$

E1) τ_t -analytic element φ is weakly dense in M .

τ_t -analytic element $\varphi \rightarrow \sigma$

$x \rightarrow \tau_x(x)$ is Lemma 2) \nsubseteq 3月 3's

$\tau_t(x) = \tau_t^{\varphi}(x)$ τ_t -analytic element φ is weakly dense

$$t^1) \quad \tau_t(x) = \tau_t^{\varphi}(x) \quad \forall x \in M.$$

Step IV) 以上のこととより

$$\exists \bar{U} \quad \tau_t^{\bar{\varphi}}(x) = U_t \tau_t^{\varphi}(x) U_t^*$$

$$(D\varphi : D\varphi)_t = V_t \quad a_t = U_t V_t^* \in \text{center of } M$$

$$a_{t_1+t_2} = a_{t_1} \cdot a_{t_2} \neq 1$$

$$\exists h \in M \text{ center of } M. \quad a_t = h^{it} \quad h \geq 0$$

$$\text{Lemma 1 E1)} \quad (D\varphi(h), D\varphi) = h^{it} = a_t$$

$$\therefore (D\varphi(h), D\varphi) = (D\varphi(h), D\varphi)(D\varphi : D\varphi) = h^{it} \cdot V_t$$

$$= a_t V_t = U_t. \quad \text{q.e.d.}$$

§3. Def $T(M) = \{T_0 \in R : \exists \varphi \quad \tau_{T_0}^{\varphi} = 1\}$

定理 3 i) $T_0 \in T(M)$

ii) $\forall \varphi \quad \tau_{T_0}^{\varphi} = \text{inner}$

iii) $\forall \varphi \Rightarrow \exists u = \text{unitary} \in \text{center of } M_\varphi \text{ s.t. } \tau_{T_0}^{\varphi}(x) = uxu^*$

iv) $\forall \varphi \quad \exists \psi \quad \varphi + \psi(x) = \varphi(h.x)$

但し $h \in \text{center of } M_\varphi, h \geq 0$

$$\tau_{T_0}^{\varphi} = 1$$

v) $\exists \varphi \quad \tau_{T_0}^{\varphi} = \text{inner}$

i) ~ v) は同値

証明) 定理 i) より次の事は明らかである。

$$iv) \Rightarrow i) \Rightarrow ii) \Rightarrow v) \Rightarrow iii)$$

$$ii) \Rightarrow iii) \quad \forall \varphi \quad 1 = \text{inner} \quad \tau_{T_0}^{\varphi} = \text{inner}, \quad \exists u \in M_\varphi \text{ s.t. } \tau_{T_0}^{\varphi}(x) = uxu^*$$

φ は $\tau_{T_0}^{\varphi}$ -invariant だから $\varphi(u x u^*) = \varphi(x) \quad \forall x \in M_\varphi$

$$\therefore \eta_\varphi u \subset \eta_\varphi \quad \eta_\varphi u^* \subset \eta_\varphi$$

$$\therefore u M_\varphi \subset M_\varphi, \quad M_\varphi u \subset M_\varphi,$$

$$\forall x \in M_\varphi \quad \varphi(u x) = \varphi(x u)$$

$$[1] \quad 1 = \text{inner} \quad u \in M_\varphi \quad \tau_{T_0}^{\varphi}(x) = uxu^* = x \quad \forall x \in M_\varphi$$

∴ $u \in \text{center of } M_\varphi$

$$iii) \Rightarrow iv) \quad u = \text{implement } \tau_{T_0}^{\varphi}$$

$h \in \text{center of } M_\varphi, h \geq 0$

$$u = h^{-1} T_0$$

$$\varphi \stackrel{def}{=} \varphi(h_+)$$

Lemma 1 たり $\mathcal{T}_t^{\varphi}(x) = h^{it} \mathcal{T}_t^{\varphi}(x) h^{-it}$
 $\therefore \mathcal{T}_{T_0}^{\varphi}(x) = x$

今まで知ったところでは Kallman [3], Takesaki [2] 等の結果を
 使って次の様な事がわかる。

定理 4 i) M : semi-finite $\Rightarrow T(M) = R$

ii) 特に M^* : separable ならば

$$M: \text{semi-finite} \Leftrightarrow T(M) = R$$

§ 4

以下で具体的な M に関する $T(M)$ を計算する。

I) $M = \bigoplus_{v=1}^{\infty} (M_v, \varphi_v)$ M_v : factor φ_v : state

= 定理 5 $T_0 \in T(M) \Leftrightarrow i) \cap T(M_v) \ni T_0$

$$ii) \mathcal{T}_{T_0}^{\varphi_v}(x) = u_v x u_v^*$$

$$\Rightarrow \sum | \varphi_v(u_v) | < \infty$$

証明 (\Rightarrow) まず Kallman [B4] の結果を述べておく。

$\lambda = \lambda_1 \otimes \lambda_2 = M_1 \otimes M_2$: automorphism: inner $\Leftrightarrow \lambda_i$: inner $i=1, 2$

IN S construction にて $\varphi_v(x) = (\pi \Delta_v, \Omega_v)$ とする

以下で $M = \bigoplus_{v=1}^{\infty} (M_v, \Omega_v)$ について論じる, $\varphi = \bigoplus_{v=1}^{\infty} \varphi_v$ とする

$\mathcal{T}_t^{\varphi}(\cdot) = \bigoplus_{v=1}^{\infty} \mathcal{T}_t^{\varphi_v}$ なる事と Kallmann の結果を使ふと

$T_0 \in T(M) \Rightarrow T_0 \in \bigoplus_{v=1}^{\infty} T(M_v)$ は明らかである。

ii) u : implement $\tau_{T_0}^{q_v}$

$\{\pi_{v \in T} \otimes_{\mathcal{V}} \pi_{v \notin T} : T \text{ finite set}, v \in M_v\} = \text{dense in } \{\pi_{v \in T_0}^{q_v} : v \in T_0\}$

T_0 : finite set $C = \{(u \otimes_{\mathcal{V}} \pi_v, \pi_{v \in T_0} \otimes (\pi_{v \notin T_0}^{q_v})) | u \neq 0\} \subset \mathbb{C}$

$$T_0 \cap T = \text{finite} \quad \tau_{T_0}^q = \pi_{v \in T_0} \otimes \pi_{v \notin T_0}^{q_v}$$

以上より u_v : implement $\tau_{T_0}^{q_v} \quad v \in T$

V_T : implement $\otimes_{v \notin T} \tau_{T_0}^{q_v}$, \mathcal{M} の factor たる事

より $\exists \lambda_T \in C, u = T \lambda_T (\pi_{v \in T} \otimes u_v) \otimes V_T$

$$\|u\| = \sqrt{\sum_{v \in T_0} |(u_v \pi_v, \pi_v \pi_v)| + |(V_T \otimes_{v \notin T} \pi_v, \pi_v)| \prod_{v \in T \setminus T_0} |(u_v \pi_v, \pi_v)|}$$

$$|(V_T \otimes_{v \notin T} \pi_v, \pi_v)| \leq 1, \sqrt{\prod_{v \in T \setminus T_0} |(u_v \pi_v, \pi_v)|} \leq 1 \quad \text{より}$$

$\sqrt{\prod_{v \in T \setminus T_0} |(u_v \pi_v, \pi_v)|}$ converge as $T/T_0 \uparrow \infty$

$$\therefore \|u\| = \sqrt{1 - |(u_v \pi_v, \pi_v)|} = \sqrt{1 - |\varphi_v(u_v)|} < \infty$$

(\Leftarrow) 明らか

e.d.

特に M が I, T, P, F, I によって上の結果を従う。

$$M = \bigoplus_{v \in T} (M_v \pi_v) \quad \text{sp}(M_v \pi_v) = \{\lambda_v, \lambda_v^*, \dots, \lambda_v^n\}$$

$$h_v = \begin{pmatrix} \lambda_v & 0 \\ 0 & \lambda_v^* \end{pmatrix}$$

$$\Rightarrow \varphi_v(x) = (x \pi_v, \pi_v) = T_v(h_v x) \quad \text{F} \quad \tau_v^{q_v}(x) = h_v^* x h_v$$

$$T_0 \in T(M) \iff \sum |1 - \frac{1}{\lambda_v} \lambda_v^{1+q_v}| < \infty$$

$$\therefore \text{sp}(M_v \pi_v) = \{P, Q\} \in S(M)$$

$$T(M) = \bigcup_{n \in \mathbb{Z}} \exp(-2\pi i / \tau_0) = \lambda$$

G_2 : 2-generator free group \mathbb{F}_2 , $U(G_2) \in \text{regular}$

rep F が非自由な \mathbb{F}_2 -factor である。

$$T(U(G_2) \otimes M_{\infty}) = T(M) \quad \text{?} \quad \text{?}$$

non-hyper-finite III-type-factor が非可算無限個の存在の
証明と T(3)

II) μ : σ -finite measure on Ω .

γ : bijection, bi-measurable transformation on subgr.

$\forall \Omega = \mu$ に関する γ は $\omega \mapsto \gamma(\omega)$ の γ は

$L^{\infty}(\Omega, \mu) \ni v \mapsto \gamma(v) = \gamma \circ v \in L^{\infty}(\Omega, \mu)$

$N^*(\Omega, \Omega) \stackrel{\text{def}}{=} \gamma \in L^{\infty}(\Omega, \mu)$ の cross product.

定理6 $T_0 \in T(W^*(\Omega, \Omega)) \iff \exists \nu$: poseli measure on Ω

$$\text{at } v \sim \mu, \frac{d\nu}{d\mu}(v) = p^n, n \in \mathbb{Z}, p = \exp(-2\pi/T_0)$$

$$\forall s \in \Omega, \omega \in \Omega$$

Proposition 1

N : semi-finite subalgebra of M .

$E: M \rightarrow N$: normal faithful conditional expectation

$$N(E) \stackrel{\text{def}}{=} \{u \in E(u x u^*) = u(E(x)) u^*, \forall x \in M\} \subset M_u$$

$$C = N' \cap M \subset N,$$

$\gamma: N(E) \text{ sub group } \tau: M = [N, \gamma]'' \in \mathcal{T}$

τ : true on N

$$\forall v \in \Omega \quad \exists f_{V,T} \in C \text{ at } T(VxV^*) = T(f_{V,T}x), \forall x \in N$$

以下で ii) ~ iii) は同値

$$1) T_0 \in T(M)$$

12

$$\text{ii) } \forall \tau : \text{trace}, \exists \text{vec} u \text{ s.t. } \forall u \in \mathbb{C}^n \quad u^* v u v^* = p_{u, \tau}^{i\tau_0}$$

$$\text{iii) } \forall \tau : \text{trace}, \text{ s.t. } p_{u, \tau}^{i\tau_0} = 1 \quad \forall u \in \mathbb{C}^n.$$

証明の手

Proposition 2. [Zeller-Meier [7]]

Ω : Neumann algebra

\mathcal{G} : discrete group of automorphisms on Ω .

$$M = W^*(\mathcal{G}, \Omega) - (\mathcal{G} \times \Omega \text{ cross product})$$

$$\text{i) } I: a \longrightarrow (I(a))_{t, u} = c_t^u t^{-1} a \in M$$

$I: a \longrightarrow I(a) = N \subset M$ = isomorphism

$$\text{ii) } E: a \in M \longrightarrow (I(a)_s) = \text{normal fact. conditional expectation on } N$$

$$\text{iii) } \forall s \in \mathcal{G} \xrightarrow{\psi_s} U_s \in M. \quad (U_s)_{t, u} \stackrel{\text{def}}{=} c_t^u e_u: \text{isomorphism}$$

$$N(E) \supset \{U_s : s \in \mathcal{G}\} = \mathcal{G}. \quad \mathcal{G} \models M = \{N, \mathcal{G}\}'$$

$$\text{iv) } s \in \mathcal{G} \quad x \in \Omega. \quad U_s I(x) U_s^* = I(s^{-1} x)$$

証明の手

定理の証明

$$\forall \tau : \text{trace on } N = I(L^*(\Omega, \mu)) \models \mathcal{G} \models \tau$$

$\exists \nu$: measure on Ω s.t. $\nu \sim \mu$

$$T_\theta(I(f)) = \int f(u) d\nu(u) \quad \forall f \in L^*(\Omega, \mu)_+$$

$$\forall x \in N_+, \forall s \in \mathcal{G} \quad I = \mathcal{G} \models \tau. \quad T_\theta(U_s^* x U_s) = T_{s^{-1}}(x) = \int x(u) d(\tilde{s}^{-1}\nu)(u)$$

$I \models \mathcal{G} \models \tau$. Proposition 2) iii) $I \models \tau$

$\exists T = \text{trace on } N$. s.t. $p_{s,v}^{(T)}(\omega) = 1$
