Invariants of Unitary Reflection Groups

寺尾宏明
(国際基督教大学(ICU))

有限ユニタリ鏡映群は Shephard-Todd [3] によって分類されていて、1 ~ 37 までの名前が与えられている。本稿では、それらの不変量の表を作り、そこから得られる observation を紹介したい。

§1. Notations and Table

1. The names of finite unitary reflection groups are due to Shephard-Todd [3],
2. $m_1, \cdots, m_\ell$ are the exponents of group (i.e., the degrees of basis of invariant polynomials -1); $(m_1 \le m_2 \le \cdots \le m_\ell)$
   $n_1, \cdots, n_\ell$ are the exponents of arrangement (i.e., the degrees of basis of logarithmic derivations $+1$). (See [4]) $(n_1 \le n_2 \le \cdots \le n_\ell)$
3. $m = \sum_{i=1}^{\ell} m_i$, $n = \sum_{i=1}^{\ell} n_i$.

4. $r_i = \#\{\text{reflections of order } i\}$,

$s_i = \#\{$reflecting hyperplane H such that there exist exactly i fixing H pointwise$\}$

5. $(d_1, \cdots, d_l)$ is <u>self-dual</u> $\underset{\text{def}}{\Longleftrightarrow}$ $d_i + d_{l+1-i} = \text{const.}$ $(1 \leq i \leq l)$

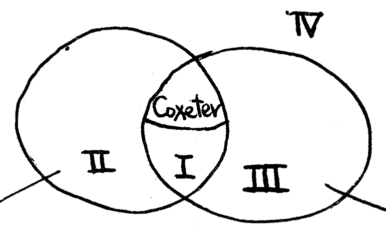
6. $(m_1, \cdots, m_l)$ and $(n_1, \cdots, n_l)$ are <u>codual</u>

$$\Updownarrow \text{def}$$

$$m_i + n_{l+1-i} = \text{const.} \quad (1 \leq i \leq l)$$

7. $t := \dfrac{2n}{l}$, $\quad H := \dfrac{2(m+n)}{2l+(m-n)}$

8. type:



generated by reflections of order 2

generated by l reflections

9. Condition (A): Are (m_i) & (n_i) both self-dual?

Condition (B): If yes, $m_1 + m_l = n_1 + n_l$?

Condition (C): Are (m_i) & (n_i) codual?

Condition (D): Is G generated by l reflections?

Condition (E): Is G generated by reflections of order 2?

§ 2. Observations

1. (Orlik-Solomon [1])

(m_i) & (n_i) are codual (condition (C))

$\Updownarrow$

G is generated by l reflections (condition (D))

$\Updownarrow$

$m_l \geqq n_l$

2. H is always a natural number. (This invariant was introduced by T. Yano.)

t has been proved to be a natural number [5].

3. There are five cases:

		(A)	(B)	(C)	(D)	(E)		
$t = H = m_l + 1 = n_l + 1$	$\Longleftrightarrow$	y	y	y	y	y	$\Longleftrightarrow$	Coxeter
$t = H = m_l + 1 > n_l + 1$	$\Longleftrightarrow$	n	-	y	y	y	$\Longleftrightarrow$	I
$t = H = n_l + 1 > m_l + 1$	$\Longleftrightarrow$	y	y	n	n	y	$\Longleftrightarrow$	II
$m_l + 1 > n_l + 1 = t > H$	$\Longleftrightarrow$	y	n	y	y	n	$\Longleftrightarrow$	III
$n_l + 1 = t > m_l + 1 > H$	$\Longleftrightarrow$	y	n	n	n	n	$\Longleftrightarrow$	IV

(with only exception: 2)

4. III $\Longleftrightarrow$ Shephard group (Orlik-Solomon [2])
