Evolution Equations and Nonlinear Problems

May, 1992

Research Institute for Mathematical Sciences

Kyoto University, Kyoto, Japan

## Preface

This volume contains a record of the lectures delivered at the conference on *Evolution Equations and Nonlinear Problems*, which was held at Research Institute for Mathematical Science in Kyoto University, Kyoto, Japan, during October 23–25, 1991. The objective of the conference was to stimulate an intensive exchange of ideas with emphasis on evolution equations and related topics.

The topics covered in the proceedings are global weak solutions of the compressible Euler equation, global weak solutions of the nonstationary two-phase Stokes flow, admissibility of difference schemes to scalar conservation laws, viscosity solutions for monotone systems, abstract Besov space approach to the nonstationary Navier–Stokes equations, second order quasilinear evolution equations, nonlinear viscoelastic equations, quasi-linear elliptic equations, linearized stability for nonlinear evolution equations, global sinks for planar vector fields, monotone operators on Hilbert manifold, asymptotic behavior of solutions of quasi-linear heat equations, and parabolic variational inequality for the Cahn–Hilliard equation.

The organizer wishes to express his thanks to all the contributors to these proceedings and the participants in the meeting, because it is due to them that the conference has been successful.

Yoshikazu Kobayashi

発展方程式と非線形問題  
研究集会報告集

1991年10月23日～10月25日

研究代表者 小林 良和 (Yoshikazu Kobayashi)

目 次

1. The global weak solutions of the compressible Euler equation with spherical symmetry ..... 1  
大阪産業大 牧野 哲 (Tetu Makino)  
東工大・理 溝畑 清 (Kiyoshi Mizohata)  
東工大・理 鶴飼 正二 (Seiji Ukai)
2. On global weak solutions of the nonstationary two-phase Stokes flow ..... 29  
北大・理 儀我 美一 (Yoshikazu Giga)  
北大・理 高橋 秀慈 (Shuji Takahashi)
3. スカラー保存則に対する差分近似の admissibility について ..... 46  
航空技研 相曾 秀昭 (Hideaki Aiso)
4. Viscosity solutions for monotone systems under Dirichlet condition ..... 62  
都立大・理 小池 茂昭 (Shigeaki Koike)
5. Abstract Besov space approach to the nonstationary Navier-Stokes equations ..... 76  
筑波大・数学系 小林 孝行 (Takayuki Kobayashi)  
筑波大・数学系 村松 寿延 (Tosinobu Muramatu)
6. A class of second order quasilinear evolution equations ..... 95  
東京理大・理 池島 良 (Ryo Ikehata)
7. Nonlinear viscoelastic equations について ..... 112  
筑波大・数学系 柴田 良弘 (Yoshihiro Shibata)
8.  $\mathbb{R}^n$  上の準線形楕円型偏微分方程式について ..... 118  
神戸大・自然科学 壁谷 喜継 (Yoshitsugu Kabeya)

9.	Linearized stability for nonlinear evolution equations and semilinear boundary value problems .....	125
	島根大・理	蚊戸 宣幸 (Nobuyuki Kato)
10.	Global sinks for planar vector fields .....	134
	中央大・理工	G. ゴルニ (Gianluca Gorni)
	Univ. di Padova	G. ザンピェリ (Gaetano Zampieri)
11.	Hilbert 多様体上の単調作用素 .....	139
	航空技研	岩宮 敏幸 (Toshiyuki Iwamiya)
	徳山女子短大	大河内 広子 (Hiroko Okochi)
12.	Asymptotic behavior as $t \rightarrow \infty$ of solutions of quasi-linear heat equations .....	152
	阪大・理	川中子 正 (Tadashi Kawanago)
13.	Parabolic variational inequality for the Cahn-Hilliard equation with constraint .....	166
	千葉大・教育	劔持 信幸 (Nobuyuki Kenmochi)
	Warsaw Univ.	M. ニエツゴトカ (Marek Niezgodka)
	Polish Acad. Sci.	I. ポウロウ (Irena Pawlow)
