

CONTENTS

	Page
1. Klaus-Detlef KÜRSTEN and Elmar WAGNER, An operator-theoretic approach to invariant integrals on quantum homogeneous $SU_{n,1}$ -spaces.....	1
2. Angela A. ALBANESE and José BONET, Ultradifferentiable fundamental kernels of linear partial differential operators on non-quasianalytic classes of Roumieu type.....	39
3. Mohamed ELKADI and Alain YGER, Residue calculus and applications.....	55
4. Hiroyuki YAMANE, Representations of a $\mathbb{Z}/3\mathbb{Z}$ -quantum group.....	75
5. Brian OSSERMAN, Mochizuki's crys-stable bundles: a lexicon and applications.....	95
6. Francisco J. CASTRO-JIMÉNEZ and Michel GRANGER, A flatness property for filtered \mathcal{D} -modules.....	121
7. Takayuki MORIFUJI, A Torres condition for twisted Alexander polynomials.....	143
8. Shigetoshi YAZAKI, Motion of nonadmissible convex polygons by crystalline curvature.....	155
9. Klas DIEDERICH and Takeo OHSAWA, On the displacement rigidity of Levi flat hypersurfaces—the case of boundaries of disc bundles over compact Riemann surfaces.....	171
10. Hisanori OHASHI, On the number of Enriques quotients of a K3 surface.....	181
11. Hiroshi ISOZAKI, The $\bar{\partial}$ -theory for inverse problems associated with Schrödinger operators on hyperbolic spaces.....	201
12. Takashi AOKI and Takayuki IIZUKA, Classification of Stokes graphs of second order Fuchsian differential equations of genus two.....	241
